

The Diversity Omni™ Antenna

from RF Venue

Building on the success of the highly acclaimed Diversity Fin® Antenna, the Diversity Omni™ Antenna is an all-new antenna designed for omnidirectional coverage of wireless microphones

- Vertically and horizontally polarized antennas on a single stand, eliminating the most common signal dropouts
- Greater flexibility in antenna placement, since only one is needed in place of two separate antennas
- Weather resistant design suited for permanent outdoor installation

The Diversity Omni Antenna is perfectly suited for indoor multi-zone projects or outdoors where large areas of coverage are needed, such as sports venues, theme parks, and amphitheaters.

To connect to a wireless microphone system, simply run both the A and B antenna inputs from an antenna distribution system like the DISTRO4 or DISTRO9 HDR and position the antenna where coverage is desired.

Shipping November, \$569 MAP

The Diversity Omni Antenna is available in convenient bundle packs with DISTRO4 and DISTRO9 antenna distribution systems
