

Specifications

Active In-Line Amplifier

(SKU: ILAMP-ACT)

The RF Venue active In-Line Amplifier is designed to compensate for signal loss on long coax runs. One active In-Line Amp can compensate 10dB of cable attenuation which is about 20 meters of RG-58 cable. The In-Line Amp can be powered by power output from an antenna distributor/receiver or DC adapter (+12V/0.5A). The red light indicates the unit is getting power. Up to two In-Line Amps can be cascaded.

- A BNC female to BNC female adapter or coax jumper is required for cascade (not included).
- Two In-Line Amps are required for diversity applications.

SKU **ILAMP-ACT** Includes:
 (1) Inline Amplifier
 (1) AC Power Supply
 (1) Mounting Bracket & Screws
 (1) Spec Sheet / User Guide

Electrical

Frequency range470~960 MHz
 Gain (nominal) 10 dB
 Power Requirements12 VDC; 100mA
 Power Levels -60 to -20 dBm
 RF Input/Output..... BNC Female

Physical

Dimensions..... 75x18.2x77mm / 3x.7x3"
 Weight 140g / 5oz
